Sustainable Circularity

CIRCULARITY IS A SHARED RESPONSIBILITY.

Building a circular economy requires **more than one stakeholder** to play their part.

Sustainable Circularity

THE CIRCLE CANNOT CLOSE IF THE CONSUMER IS LEFT OUT.

Circularity does not end with packaging designed for recyclability or products reaching consumers.

What happens after consumption **matters just as much.**

Without effective collection and consumer participation, recyclable packaging can fail to reach recovery systems.

Sustainable Circularity

THIS IS WHERE DRS CAN MAKE A DIFFERENCE.

A Deposit Refund Scheme gives consumers a **defined route** to return eligible packaging, supported by a **refundable deposit.**

It can help turn responsible intentions into repeatable actions, connecting everyday consumer choices with organised collection and material recovery.

Sustainable Circularity

CIRCULARITY WORKS WHEN PARTICIPATION BECOMES PART OF THE SYSTEM.

For that to happen, the journey after consumption matters as much as the design itself.

It is also about enabling people to help packaging reach the systems designed to recover its value.
